

**FOR IMMEDIATE RELEASE**

## **Silicon360 Acquires Product Rights for CA91C078A from IDT**

MILPITAS, Calif., April 2<sup>nd</sup>, 2010--Silicon360 (Si360®), an accredited source for discontinued semiconductors, has announced its purchase of the product rights of CA91C078A, originally designed and manufactured by Integrated Device Technology (IDT).

Silicon360 now has single-source rights to both globally market and continue to manufacture the product, CA91C078A. Terms of the agreement are not disclosed, but the purchase includes all residual finished goods, hardware, and supporting documentation.

Silicon360 will provide comprehensive product support through validation, value enhancement through upgrading, counterfeit evaluation and regular stock rotations. After-market sustenance and extended supply will be ensured.

“Silicon360 offers more than just components to its customers, we provide peace of mind”, says Don Pecko, Business Manager for Silicon360. “All of the EOL components go through an initial counterfeit assessment process and are fully retested at temperature, then marked with a dual logo approach to ensure positive traceability. Customers are assured of receiving known good parts without question.”

“We will be the only accredited source for the CA91C078A that will ensure a continuous, risk-free, and extensively validated supply. We will offer the option of adding the customer’s part number to this device.”

### **About Silicon360**

**Silicon360 (Si360®) is a fabless semiconductor company that offers product enablement, total parts management and product distribution. Our forte is having in-house capabilities of design, packaging, value-added up-screening and testing and qualification ensuring domestic content, cutting-edge technology and reduced costs. We offer complete obsolescence management for hard-to-find, legacy and EOL products that require sustained product support, product validation, extended supply, and controlled inventory management. The Si360® team has delivered breakthrough solutions for complex ASIC's and specialty packages for high-reliability applications, high-density commercial memories and large SOC's.**
